

APPARATUS AND METHOD FOR DELIVERY OF MEDICATION

Abstract

An apparatus and method for delivery of medication is provided. The invention includes a system for organizing and storing pre-determined dosages of medication by
5 matching indicia on both the storage apparatus and the apparatus containing the medication. The invention allows visually-impaired, elderly, or those unable to read conventional indicia to determine the appropriate dosage of medication and to safely select and take the medication in the appropriate pre-determined dosage indicated by the indicia on the storage apparatus matching the indicia on the apparatus containing the
10 medication.
